Document 2: JP, 2001-197120, A (Apple Computer, Inc.), 19 July, Full text; all drawings & US, 6134243, A

Claims 1-6, 9, 11-13, 15, and 16-19

Document 1 describes, when receiving and reproducing a MP4 file, calculating a pre-buffer time and decoding start time from data size if receiving data units (Pav 1 for example) that are AV data that is included in the file, and based on this, performing reproduction processing. Document 1 also suggests that the information relating to this data size is essentially the "reproduction control information" and "reproduction control unit information" of the claims, and given the technical matter related to hint data of the prerequisite MP4 file described in document 2, none of the claims appears to involve an inventive step.

Claims 7-8, 10, and 14

Documents 1 and 2 do not describe converting reproduction control unit information according to content transmission status; that reproduction control information includes reproduction control unit information in each encrypted screen on a screen; and that reproduction control information shows the cycle for possible multiple image random access for playback control information. Based on documents 1 and 2, the inventions do not appear to possess an inventive step.
